

T-16

Ej 3

$$Z(s) = \frac{2s^2 + 1}{s(3s^2 + 2)}$$

$$L_1 C_2 = \pi$$

Remoción parcial del polo en  $\infty$  para tener el cero en  $\pi$

Remueve el polo en  $\pi$

Remueve polo en  $\infty$

$$Y = \frac{s(3s^2 + 2)}{2s^2 + 1}$$

$$Y_2 = Y - sK_{\infty}'$$

$$Y_2 \Big|_{s=\pi} = 0 \Rightarrow Y \Big|_{s=\pi} = sK_{\infty}' \Big|_{s=\pi}$$

$$K_{\infty}' = \frac{Y(s)}{s^2} \Big|_{s=\pi}$$

$$K_{\infty}' = \frac{s(3s^2 + 2)}{s(2s^2 + 1)} \Big|_{s=\pi} = \frac{-3\pi + 2}{-2\pi + 1}$$

$$K_{\infty}' = \frac{-7,4248}{-5,2832} = \frac{7,4248}{5,2832}$$

$$Y_2 = Y - s K_{\infty} = \frac{s(3s^2+2)}{2s^2+1} - s \frac{7,4248}{5,2832}$$

$$Y_2 = \frac{(3s^3+2s)5,2832 - (2s^2+1)(s)(7,4248)}{5,2832(2s^2+1)}$$

$$Y_2 = \frac{s^3 + s\pi}{5,2832(2s^2+1)} = \frac{s(s^2 + \pi)}{5,2832(2s^2+1)}$$

$$Z_2 = \frac{5,2832(2s^2+1)}{s(s^2+\pi)}$$

$$2K_1 = \lim_{s^2 \rightarrow -\pi} \frac{5,2832(2s^2+1)}{s(s^2+\pi)} \cdot \frac{(s^2+\pi)}{s} = \lim_{s^2 \rightarrow -\pi} \frac{5,2832(2s^2+1)}{s^2}$$

$$2K_1 = \frac{5,2832(-2\pi+1)}{-\pi} \approx 8,88468$$

$$Z_4 = Z_2 - \frac{2K_1 s}{s^2 + \pi} = \frac{5,2832(2s^2+1)}{s(s^2+\pi)} - \frac{8,88468 \cdot s}{s^2 + \pi}$$

$$Z_4 = \frac{(2s^2+1)5,2832 - s^2 \cdot 8,88468}{s(s^2+\pi)} = \frac{s^2 \cdot 1,68172 + 5,2832}{s(s^2+\pi)}$$

$$Z_4 = \frac{1,68172(s^2+\pi)}{s(s^2+\pi)}$$

$$Y_4 = \frac{s}{1,68172}$$

Vemos que lo obtenido analíticamente coincide con el método gráfico

Los valores de los componentes serán entonces:

$$C_1 = K_{\infty}' = \frac{7,4248}{5,2832} \approx \frac{3\tilde{\pi}-2}{2\tilde{\pi}-1}$$

$$L_1 = \frac{2K_1}{\omega^2} = \frac{2 \cdot 8,88468}{\tilde{\pi}} \approx \frac{(2\tilde{\pi}-1)^2}{\tilde{\pi}^2}$$

$$C_2 = \frac{1}{2K_1} = \frac{1}{8,88468} \approx \frac{\tilde{\pi}}{(2\tilde{\pi}-1)^2}$$

$$C_3 = \frac{1}{1,68172} \approx \frac{1}{2(2\tilde{\pi}-1) - \frac{(2\tilde{\pi}-1)^2}{\tilde{\pi}}}$$

Observación: Los valores exactos de los componentes son los que están con  $\tilde{\pi}$  pero se aproximó para facilitar el álgebra

Se puede ver que tiene un polo en continuo ya que para  $s=0$   $Z(s) \rightarrow \infty$
